Virendra Vyas

Senior full-stack .NET engineer

Eastbourne, East Sussex, UK virendra1629@gmail.com virendravyas.dev linkedin.com/in/virendra-vyas
github.com/virendra-vyas

UK settled status (ILR). No sponsorship needed. Open to select contract and permanent roles. Contract work through Yug Solutions Ltd, outside IR35. Fully remote, or hybrid in London.

SUMMARY

About nine years of commercial C# and .NET, with React on the front end. I lead a team of five as Lead Software Engineer at Datascope Systems, and in November 2024 I founded Yug Solutions Ltd, a bootstrapped UK software company building products that solve real problems.

KEY ACHIEVEMENTS

- **Zero-incident .NET 7 to .NET 10 migration.** Led a team of five through a staged, test-driven migration of a live platform. Test coverage went from roughly 40 to 85 percent in two sprints, and releases moved from weekly to daily.
- **40+ UK government API endpoints behind one contract.** GovBridge UK puts HMRC Making Tax Digital, Companies House, DVLA, Land Registry and FHRS behind one gateway. Corporation Tax submission works end to end and was accepted by HMRC's real Transaction Engine.
- **Two engineers mentored from mid-level to senior.** At Datascope Systems I lead a team of five, run code review and set the team's engineering standards, and I have mentored two engineers from mid-level to senior level.

EXPERIENCE

Lead Software Engineer, Datascope Systems Ltd — August 2022 to present

I lead a team of five engineers on DeviceHub, an IoT device management and access-control platform, and own delivery end to end.

- Test coverage from roughly 40 to 85 percent in two sprints.
- Regression defects down about 35 percent after introducing CI/CD.
- Releases moved from weekly to daily.
- A zero-incident migration from .NET 7 to .NET 10.
- Four critical vulnerabilities fixed before exploitation.

Founder and Principal Engineer, Yug Solutions Ltd — November 2024 to present

A bootstrapped UK software company I founded and direct. I build products through it, including GovBridge UK, and take on contract work.

- Live at api.govbridge.co.uk with 40+ endpoints behind one contract.
- Corporation Tax (CT600) submission accepted by HMRC's real Transaction Engine.
- A tool-calling agent with an evaluation harness, and an MCP server, built on the same gateway.

virendravyas.dev/work/govbridge/

Lead Engineer and Sole Architect, IntelliBooks (freelance, through Yug Solutions)

July 2025 to February 2026

A greenfield accounting and tax application for a regulated domain, built as the sole engineer, with HMRC integrations tested against the HMRC sandbox.

- HMRC VAT, Self Assessment, National Insurance and Customs integrations working against the HMRC sandbox.
- Automated VAT return submission.
- Calculation processing with full audit trails.

virendravyas.dev/work/intellibooks/

Tech Lead, ConnectResearch (freelance, through Yug Solutions) — July 2025 to December 2025

A multi-tenant B2B marketplace with an event-driven backend on Azure Service Bus, Stripe milestone payments and a rules-driven financial calculation engine.

- Event-driven backend with idempotency and dead-letter handling from the start.
- Embedding-based consultant matching in production.
- Monitoring cost down about 40 percent.

virendravyas.dev/work/connectresearch/

Full Stack .NET Developer, Mondaq Ltd — February 2022 to August 2022

Backend and front-end features on a high-traffic, global B2B legal content platform. Improved API performance by about 18 percent through query refactoring.

- ASP.NET Core APIs and React features.
- SQL Server stored procedures and EF Core.

Software Developer, Goodmaysys Software Technologies — October 2019 to January 2022

Built and maintained GSLFx, a live money-transfer platform, including real-time status updates, Cosmos DB data modelling, reporting, and HMRC and DVLA integrations.

- Real-time transaction status updates with SignalR.
- Made the Cosmos DB partition key and data model decisions for high-throughput transaction data alongside SQL Server.
- SSIS packages for data movement and SSRS for financial reporting.
- HMRC (VAT, Self Assessment, National Insurance and Customs) and DVLA integrations under OAuth 2.0, with audit logging.
- Stripe integration.
- Mentored two junior developers. Regression bugs fell by about 20 percent through stricter code review.

Web Developer, Whizability — February 2018 to August 2018

Web applications and internal tooling for small business clients in ASP.NET, C# and JavaScript.

Junior Software Engineer, MG Infosoft — January 2017 to January 2018

Commercial web application features with REST API integration, before postgraduate study in the UK.

SKILLS

C# and .NET (about 9 years)	.NET 7, 8 and 10, ASP.NET Core, EF Core, ASP.NET MVC and WCF (legacy), REST API design, SignalR, Background services, Clean architecture and SOLID
Front end	React (about 7 years), TypeScript (4 years), JavaScript, Next.js (about 1.8 years), Vite
Data	SQL Server, PostgreSQL, including pgvector, Cosmos DB (data modelling and partition key design), Redis, SSIS, SSRS
Cloud and delivery	Azure: Functions, Service Bus, App Service, Key Vault, Application Insights, DevOps, Docker, balena, Terraform, GitHub Actions, CI/CD (5 years), Cloudflare Pages, Render, Vercel, AWS at architecture and service-selection level
Testing	xUnit, Moq, Integration testing, Test-driven delivery
Security	OAuth 2.0, OpenID Connect, JWT, Role-based access control, GDPR-compliant audit logging, OWASP ASVS
Integrations	HMRC Making Tax Digital: VAT, Income Tax, PAYE, CIS, HMRC Corporation Tax (CT600 through GovTalk), HMRC Self Assessment, National Insurance and Customs, Companies House, DVLA, Land Registry, Stripe, Dynamics 365 Business Central (OData), Power Platform connectors
Leadership	Leading a team of five, Mentoring: two engineers taken from mid-level to senior, Code review, Engineering standards, Stakeholder communication
AI engineering	Claude API, Claude Code, Tool-calling agents, MCP server, Multi-agent pipelines, Evaluation harnesses, OpenAI embeddings, pgvector semantic search
Python (secondary language)	AI pipelines and agents, Scraping, Data processing and reporting

WRITING AND OPEN SOURCE

- My API Was Logging People's National Insurance Numbers. I Never Told It To. (dev.to)
- GovBridge UK: Why I Built a Unified API Gateway for UK Government Data (HMRC, Companies House, DVLA, Land Registry) (dev.to)
- What HMRC's Fraud Prevention Headers Actually Require (That the Docs Don't Tell You) (dev.to)
- Two JWT Bearer Schemes, One API: A Real ASP.NET Core Setup (dev.to)
- Swagger UI Is Showing the Wrong Auth Requirement on Every Endpoint — Here's the Fix (dev.to)
- What building against HMRC's MTD APIs actually looks like in 2026 (the undocumented gotchas nobody warns you about) (dev.to)
- Fix CountAsync ignoring PostProcessingAction, merged into ardalis/Specification

EDUCATION

MSc Computing, De Montfort University, Leicester, 2018 to 2019

BE Computer Engineering, Gujarat Technological University, 2012 to 2016

Diploma in Computer Engineering, Gujarat Technological University, 2009 to 2012

CERTIFICATIONS

Microsoft Azure Developer Associate (AZ-204) (In progress)

AWS Serverless Architecture

OWASP Application Security Verification Standard (ASVS)

TestDome JavaScript (August 2021)
